

Solution Brief

Stay Ahead Of Attackers

Ammune.ai is the easiest way to secure your APIs. Simulate attacker reconnaissance to rapidly find and fix issues without any integrations, installations, or implementations.

Find Public Issues

Automatically discover public APIs, domains, and vulnerabilities. Easily find exploitable intelligence, such as leaked information, to understand the attack paths available to adversaries.

Solution Brief

- Eliminate blindspots and find critical issues including API keys and credentials leakages, API code & schema exposure, API infrastructure misconfigurations, and other vulnerabilities in documentation, public resources, and more
- Locate “shadow domains” and sub-domains that were previously unknown, unmanaged, or forgotten
- Monitor for changes in APIs, domains, and developer activity to build a complete and current inventory of publicly accessible assets.

Fix Issues Quickly

Rapidly reduce risks and eliminate weaknesses before they can be exploited. Make smart, informed decisions about which issues to remediate first and shrink your attack surface in record time.

- Resolve high-severity issues in hours, instead of weeks or months, by finding them before exploitation. Take action immediately with integrations, and custom workflows through Ammune.ai Runtime Protection
- Categorize vulnerabilities by severity automatically to align with your organization’s risk tolerance and desired security posture
- Share findings and feedback to inform development planning to deliver secure apps and API faster.

Solution Brief

[illegible]

Prevent Breaches

Continuously secure your customer data, PII, internal documentation, intellectual property, regulatory standing, shareholder value, and more with automatic scanning and protection against evolving threats.

- Automate policy enforcement with custom policies, configurable severity, data classification, and more with the complete Ammune.ai API Security Platform
- Avoid expensive regulatory fines and reputational damage from security incidents, and confidently complete your next audit with no surprises, and no late-night projects
- Extend protection to customers by easily finding vulnerabilities that they may accidentally create

Solution Brief

Protect your APIs and enable your business

With Ammune.ai, you can be sure that the vital connections between your applications and with your customers are secure and operational. Even better, continuous protection is only a few clicks away: simply provide a root-level domain to get started and Ammune.ai will find the other domains, sub-domains, APIs, vulnerabilities, and public issues that put your organization at risk.

Automatic Scans

Automatically scan your external attack surface at regular intervals to find vulnerabilities before attackers.

Shadow Domain Discovery

Go beyond known domains to discover forgotten, neglected, or otherwise unknown 'shadow domains' that pose a security risk.

Broadest Coverage of Public API Issues

Automatically search for issues and vulnerabilities, including:

- API Credentials Leakage
- Internal API Documentation Leakage
- WAF / CDN Bypass
- Configuration Exposure
- API Returns Sensitive Data
- And more

Solution Brief

One Complete Solution, Full Lifecycle API Security

As part of the Ammune.ai API Security Platform, Recon works natively with Ammune.ai's Posture Management, Runtime Protection, and API Security Testing products. With Ammune.ai, you'll have a complete API security solution that protects the full lifecycle of your APIs, enabling your business to move faster and more confidently to drive revenue, lower costs, and reduce risk.

Actionable Intelligence

Take action immediately and directly with relevant, contextual data.

Contextual Information

View issues in context with other Posture Management and Runtime issues, plus guidance on the potential impact and recommended remediation actions for known issues.

Solution Brief

Custom Policies

Create custom policies to identify high severity issues.

Customizable Severity

Customize issue severity to align with your organization's risk tolerance, regulatory requirements, and internal policies.

Custom Workflows

Create custom workflows to take action immediately, from creating tickets or notifying key stakeholders, to updating network configurations

Integrations

Connect with your existing infrastructure to quickly and automatically remediate issues when Recon is deployed with the entire Ammune.ai API Security Platform.
